To calculate filing fees, refer to the category fee list and examples in the instructions for filling out WPA Form 3 (Notice of Intent).

B. Fees

Fee should be calculated using the following process & worksheet. **Please see instructions before filling out worksheet.**

Step 1/Type of Activity: Describe each type of activity that will occur in wetland resource area and buffer zone.

Step 2/Number of Activities: Identify the number of each type of activity.

Step 3/Individual Activity Fee: Identify each activity fee from the six project categories listed in the instructions.

Step 4/Subtotal Activity Fee: Multiply the number of activities (Identified in Step 2) times the fee per category (Identified in Step 3) to reach a subtotal fee amount. Note: If any of these activities are in a Riverfront Area in addition to another Resource Area or the Buffer Zone, the fee per activity should be multiplied by 1.5 and then added to the subtotal amount.

Step 5/Total Project Fee: Determine the total project fee by adding the subtotal amounts from Step 4.

Step 6/Fee Payments: To calculate the state share of the fee, divide the total fee in half and subtract \$12.50. To calculate the city/town share of the fee, divide the total fee in half and add \$12.50.

Proposed Project : Double Cantilevered Dock

Project Location : 328 The Trail on Big Alum Lake

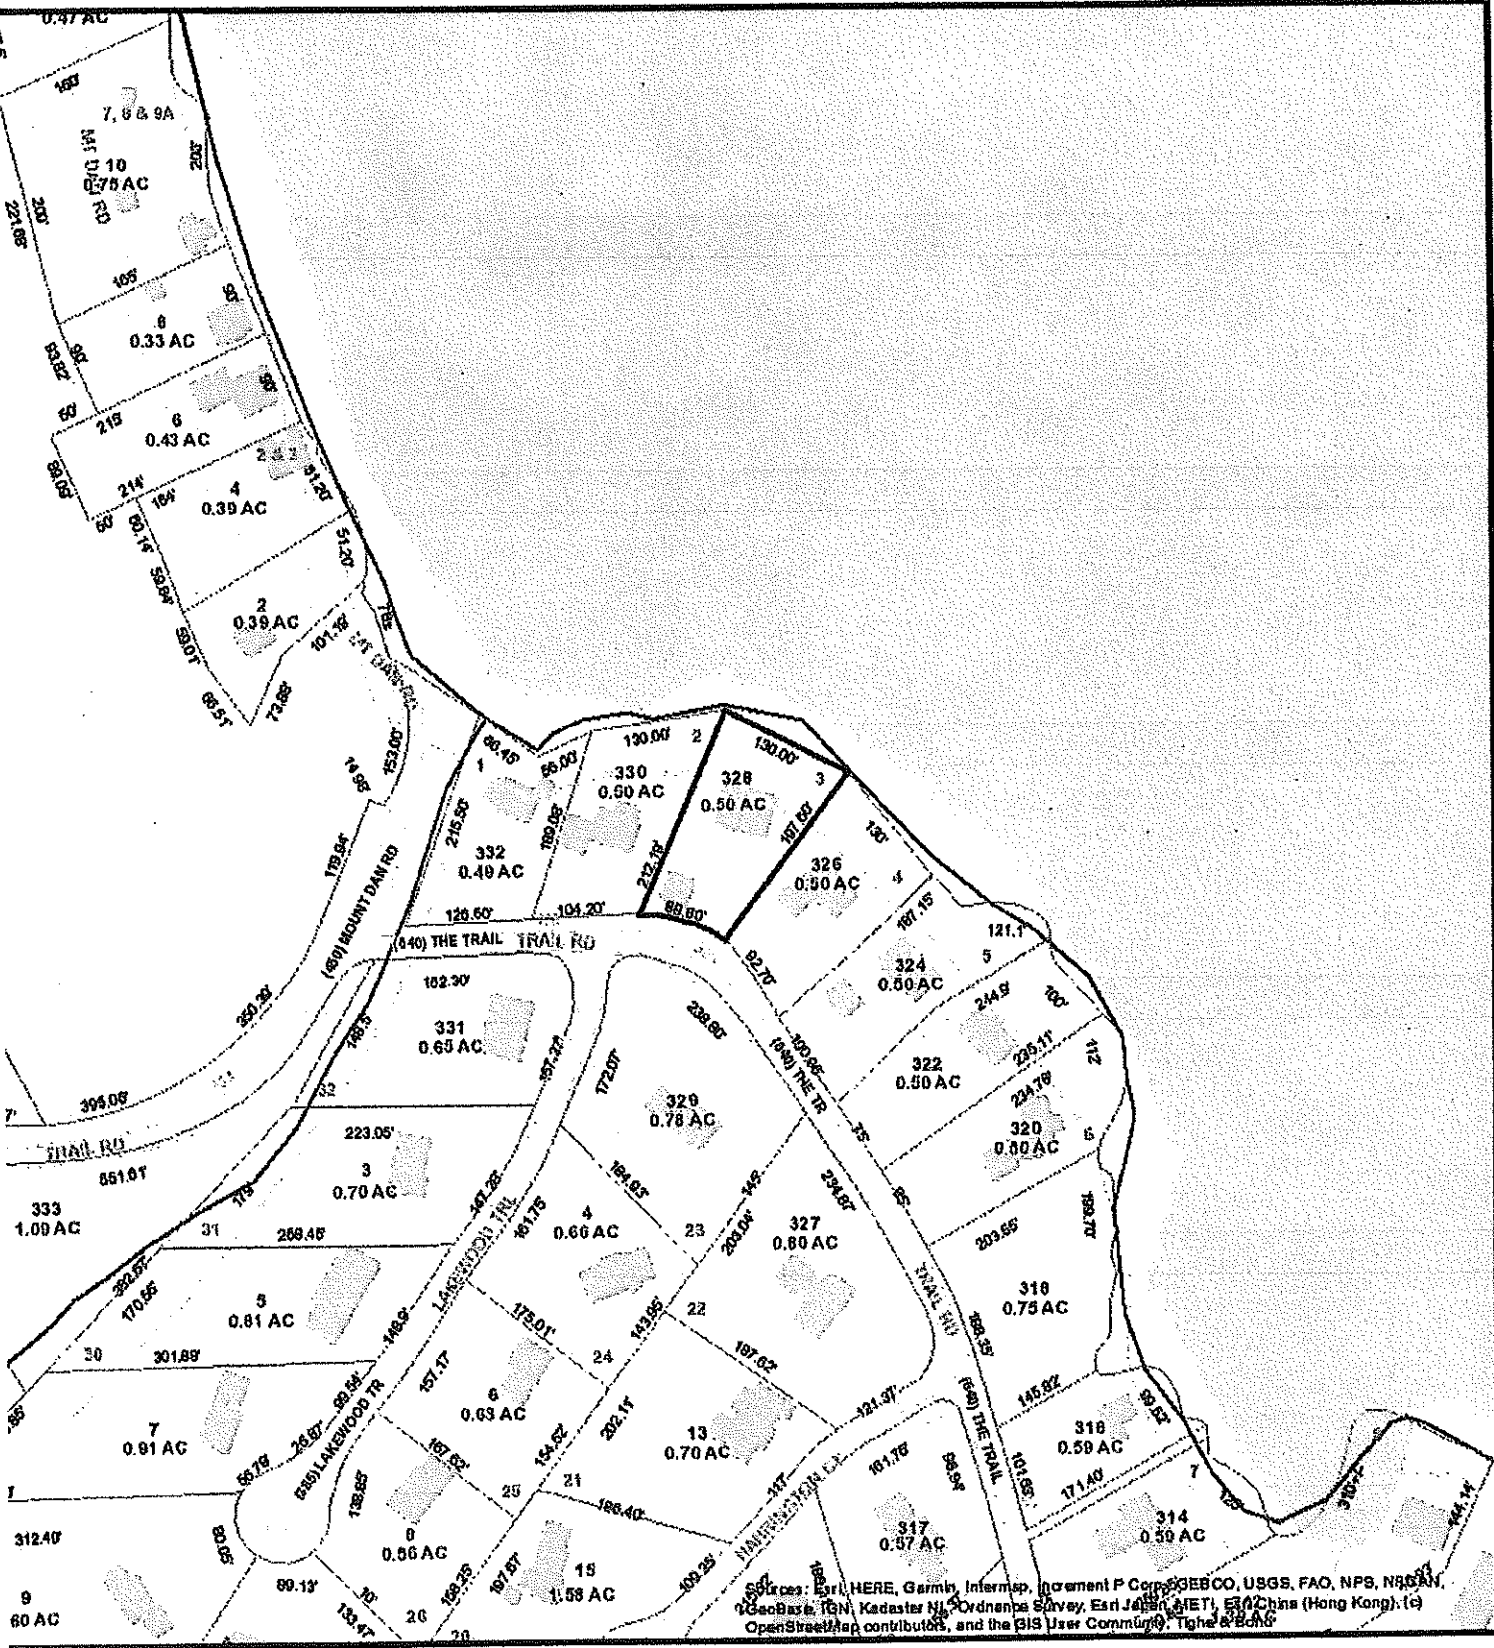

Project Owner : Rocco Falcone

Notification: A Chapter 91 Simplified waterways license has been applied for and a Pre- App number has been assigned by the Ma. DEP, it is 23-ww-PRE-0125 APP.

Project general description:

There are two separate projects. The first is the removal of an existing stone and mortar wall that is failing and the earth is eroding behind it into the lake, we are proposing to improve the bank with a natural boulder shoreline that will follow the existing wall line but will vary in depth and height to recreate a natural shoreline that will never require maintenance and have a natural look. The boulder bank will also have planting pockets in it to enhance the natural look. Behind the boulder shoreline a planting buffer will be installed with plants chosen from the recommended wetland/inland shoreline listing. This will be done from the large boulder at the existing beach through the existing docks and end on the east side blending into the existing wall again where it is structurally sound and not extend past where there is thick vegetation so it remains undisturbed.

The proposed dock construction consists of two permanent cantilevered docks to replace the two existing temporary docks. One dock will be 4' wide x 20' long and the other 30' long x 11' wide. There will be 22' between the two docks with an 8' wide connecting deck replacing the existing deck which is 13' wide. The dock construction consists of two separate concrete counterweights, one for each dock that will be buried behind the shoreline boulder bank. The steel beams will be set into the counterweight and pass through the boulder bank and serve as the main structure for the docks. The dock decking will be a composite material. As noted, the buffer planting will expand and encompass the docks to create a more natural setting, the current planting will be removed and replaced with proper shoreline plantings. A grass entry to the docks will be centered on the back side of the deck for access. Erosion control methods including straw wattle, silt fence and hydraulic booms will be installed and a designated spot on site will store additional erosion control materials if needed.
